Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with calypso wash motion manual . To get started finding calypso wash motion manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

calypso wash motion manual

A grounded electrical outlet located within 4 ft. 1.2 m of where the power cord is attached to the back of the washer. See "Electrical Requirements.". Do not reinstall into the washer, the styrofoam that contains the supplied parts. Select the drain hose installation method you need. See "Alternate Parts You May Need." Fig. Gently lower the washer to the floor. Prop up the front of the washer about 4 in. 10.2 cm with a wood block or similar object. The block needs to support the weight of the washer. Screw on coupling by hand. Using the pliers, tighten the coupling an additional two-thirds turn. NOTE Do not overtighten. Damage to the valve may result. 1. Cold water inlet valve blue 2. High Efficiency detergents are formulated to control sudsing which may occur with use of regular detergents. CONTROL PANEL Extra Heavy Normal Normal Options Light Refresh CYCLE DESCRIPTIONS. Water fill temperatures can be either HOT hot water valve only, WARM both the hot and cold water valves or COLD cold water valve only. The WATER TEMP can be changed at any time during the wash cycle. Pressing the END OF CYCLE SIGNAL keypad toggles between these options by lighting one of the LEDs and beeping the corresponding end of cycle signal at the volume level selected. The Machine Controller interfaces with the Motor Controller to operate the Drive motor and Pump motor through their various functions during the cycle. The Machine Controller also directly operates the water fill and dispenser solenoids, interprets the thermistor readings, lid switch condition, as well as the position of the contacts in the Operating and. During the Peekaboo Mode, the electronic control will allow the machine to nutate at 150 NPM for a maximum of 5 seconds after the washer lid is opened. When the lid is closed, the Start pad must be pressed to continue the cycle. <http://www.games4bridalshowers.com/userfiles/ed-falcon-workshop-manual-download.xml>

- **kenmore elite washer calypso wash motion repair manual, calypso wash motion manual.**

This levels the outer wash plate so that the spin basket spins without an out of balance condition that would be caused by a tilted wash plate. The Drive Motor is linked to the drive mechanisms by a stretch belt. The belt transfers the motion of the Drive Motor to a Drive Pulley. The Drive Pulley has a splined hub, into which the Nutate Shaft is inserted and is in motion in whichever direction the Drive Pulley is turning. The operating pressure switch, marked OPR, controls the amount of water that enters the tub during normal wash and rinse functions. This switch operates in the same manner as similar pressure switches through a pressure switch tube, diaphragm and switch. By being reversible, the motor provides for two separate operations of the washer. Outer Tub The Outer Tub sump plays a role in the drain and water recirculation function The sump area includes two check balls that direct water flow when the water pump operates in the drain and recirc direction. This causes the water pump to draw the water from the tub through the recirculation port, forcing the drain check ball to seal the drain sump port and force the water through the drain hose. Drain Check Ball seals off Drain port, due to positive pump pressure, forcing water out the drain hose. When there is a contradiction, the cycle sheet itself has priority. Nutate is a counterclockwise CCW rotation of the motor. 16. Step Spin. Drive motor ramps up to speed following specific motor profiles. 17. Use this cycle to get 13 to 17 minutes of medium speed wash action and high speed final spin. For maximum soil and stain removal, liquid chlorine bleach must be used. The preset cycle wash time is 15 minutes. Cycle combines high speed wash action and high spin speed. The preset cycle wash time is 19 minutes. Cycle combines medium speed wash action and high speed spin. The preset cycle wash time is 14 minutes. The preset cycle wash time is 16

minutes. <http://www.easydaytours.com/upload/cagiva-supercity-50-manual.xml>

Cleaning starts with a spray of water and detergent mixture to thoroughly saturate your large load. The preset cycle wash time is 15 minutes. The preset cycle wash time is 14 minutes. Cycle combines extralow speed spray cleaning and wash action to provide gentle care for delicate items such as wool sweaters and silk blouses. Low spin speed helps garments maintain their shape. The preset wash time is 6 minutes. This lasts for about one minute and is followed by a brief period of extra low wash action. Soaking in this washer is different than in a conventional washer. The washer sprays the load with water and detergent for 4 minutes at extra low spin speed followed by a brief period of wash action at the speed of the selected cycle. The time displayed will include an estimate of how long it will take to fill and drain the washer. Fabric softener can be added to the Fabric Softener dispenser. ESD may damage or weaken the electronic control assembly. Both pressure switches are removed in the same manner. 1. Disconnect power from the washing machine. 2. Place the console in the service position. 3. Once this is done, the universal joint assembly can be lifted from the basket. 12. The basket can now be lifted from the tub. NOTE It may be necessary to spread apart one of the drive block sections to loosen the basket from the splines of the spin tube. These should fit together when reassembling the inner wash plate over the universal joint. UJoint Grommets NOTE Do not rotate the inner wash plate when reassembling to the universal joint. Rotating the plate may move the leveler to its tilted position which may cause the grommets to slip. NOTE The two 2 screws at the top of the bracket have ball ends. Fig. 331 Figure 332 shows all the components of the thrust plate assembly. Won't Power Up Open AC cord. Line filter open. Machine control board open. Won't Start Cycle Lid Switch failure. Loose harness connections at control boards. "Start" touchpad failure.

Control Won't Accept Touch Pad failure. Pressure Switch tube off at Pressure Switch or tub pressure dome or kink in tubing. Not draining. Won't Nutate Machine or motor controller connections loose. Drive motor inoperative. Drive belt broken. Drive mechanism failure. Levelling legs not properly installed. Balance ring cracked or loose on basket. Basket drive block loose or im properly installed. Wrong cycle for fabrics being washed. Overloading. Wash water not warm enough to relax wrinkles. Some common causes of "CE". The automatic service diagnostics mode is activated by pressing SOAK SOIL LEVEL SOAK SOIL LEVEL within five 5 seconds while the machine is in Standby Mode. Each function test will time out in three 3 minutes. To enter the manual diagnostic mode 1. Press SOAK CYCLE SIGNAL SOAK CYCLE SIGNAL within five 5 seconds while the machine is in Standby Mode. Press the EXTEND SPIN keypad to run the pump motor in Recirculation. Pressing these keypads a second time turns the pump motor off. NUTATE AND RECIRCULATE TEST This test sequence assumes the control is off. Press EXTRA RINSE again to turn off the pump. The 7segment LED will display "dt". If no AC power is present, replace the power cord. Check for 120VAC on the line filter connection to the machine controller. If no AC power is present, replace line filter. Machine Control Relay Check for 120VAC on the power cord connection to the line filter. Check for resistance values as shown WINDING RESISTANCE Main to FHOT AUX to FHOT MAIN to AUX FTC to FHOT less than .5 short MAIN to Ground. If continuity is good, replace the log valve assembly If the valves and temperature sensor are functioning properly Replace the control board. Operating and Over Fill Pressure Switch Test Check the hose connections between each pressure switch in the console and the pressure dome attached to the tub. Service must be provided by a Whirlpool designated service company.
