The user has only to choose the most relevant parameters to display on the screen. The dBadge2 contains no user serviceable parts. DO NOT open the product case, this will invalidate the warranty. Repair and battery replacement must be carried out by authorised service personnel only. Use only the recommended CEL252 microphone and when in normal use ensure you always fit the windscreen. Under no circumstances should this equipment be. The following spares are available; a replacement pack of 5 Windscreens part number DB2WS and 5 pairs of clips part number DB2CLIPS. The dBadge serial number is located on the rear label and should be quoted in any communication with Technical Support or Service. The dBadge2 should therefore be mounted on the apex of the shoulder to avoid reflections from the head which might otherwise affect the measurements. Consult your local Legislation and Standards for more information. Upon delivery, the dBadge2 will be fitted with crocodile style mounting clips on flexible webbing to aid positioning. During use, it is essential that the dBadge2 is fitted with the Windscreen part number 207069B, supplied. The Windscreen protects the microphone from potential erroneous results due to air movement passing over it but also helps to protect from dust ingress, moisture or minor impact damage. It will not normally be necessary to remove the microphone but to do so unscrew anticlockwise. When refitting take care since it has a fine thread and do not overtighten; finger tight is sufficient. To. If you wish to configure the dBadge2 manually then this must be done at this point. Please refer to Section 7 for further details. This initial startup screen displays the dBadge2 model number, a second screen then. Prices are indicative only and may vary by country, with changes to the cost of raw materials and exchange rates. Also, a unique feature of the dBadge is the alarm function. These action levels can be configured via the Insight software and used to instantly see if noise control or hearing protection measures are needed. In addition to noise exposure parameters, the time history of the noise is logged in 1 minute values of both the average noise level and the peak value for subsequent analysis of how the noise exposure has occurred. This data can be viewed and analyzed via Insight software. model has the ability to record the audio. This is useful for note taking before starting the measurements employee name, machinery in use. For further details see section 5.8. Preset Mode Run Duration Timers This mode allows a variety of settings from Off through to 1200 in 30 minute steps by pressing the left button to show the value required and then pressing the right button to accept and move on to the next menu item. Press and hold in the left button to change through the selections more quickly. The run will start and run for the selected fixed duration time chosen in this menu. Auto Lock This choice is off by default but allows the user to lock the unit during the run to prevent the display from showing any run information other than the run time and battery condition. The lock function can be switched on and off during a run by holding the right button in and pressing the left button three times in succession quickly. This allows a supervisor to inspect the run results so far at any time during a typical days measurement in the field. Clear memory setting You can choose to leave any runs in the memory or to delete them manually prior to beginning new measurements with this control. This may be needed before starting a series of long runs before being able to download to the computer program. The db35 software has been superseded by casella insight software that is delivered with the instrument.
