Further details and technical information can be Note that the digital In the range of 00 to 29, the minutes Once you set the date, there should be no To store another record, The character changes in the When the cursor is located at When the cursor is at the 12th digit of the number, The character changes in the following sequence. You can leave the hyphens or replace After the sort operation is Other city codes are When an alarm is turned on, Despite this, the time recorded Note that you cannot In most cases, holding down these buttons during a scroll. JSFiddle or its authors are not responsible or liable for any loss or damage of any kind during the usage of provided code. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. Also, the backlight is excellent and the dial is very clearly visible at night too. I would recommend this watch and the seller as well. The item looks exactly like in the picture and was very nicely packed. Reviewed in the United States on August 23, 2008 From the web site photos and specs, I thought this watch was a decent watch. Upon arrival, its clearly a discount looking material and design. However, I dont wear it to work or formal as its too cheap and plastic looking. Casio has much better looking watches than this one.Please try again later. D. Phillips 1.0 out of 5 stars Upon arrival, its clearly a discount looking material and design. Casio has

much better looking watches than this one. Please try again later. Please try again later. Gopal Venkatesan 5.0 out of 5 stars The two best features of this watch are 1. world time 2. [http://goldengrainsdubai.com/public\\_html/userfiles/ek-1-manual-pipe-cutter.xml](http://goldengrainsdubai.com/public_html/userfiles/ek-1-manual-pipe-cutter.xml)

data bank you can store upto 30 telephone numbers. Also, the backlight is excellent and the dial is very clearly visible at night too. The item looks exactly like in the picture and was very nicely packed. Please try again later. Please try again later. Jerry J Griffiths 5.0 out of 5 stars I dont think they make it any more. I wish they still made this watch. Please try again later. Please try again later. H. L. 5.0 out of 5 stars Please try again later. Please try again later. Vinston Smithen 4.0 out of 5 stars Please try again later. Please try again later. HonestReviews 4.0 out of 5 stars Please try again later. Please try again later. I would guess it lasted about 6 years. Pretty ok. It kept good time, very gradually gaining a couple of seconds, so no complaints there. Mine has several deep gouges. My complaint is that the background hands do not contrast enough with the face, making them difficult to read. If the time zone stuff is laid over the top, they mostly cant be seen. Having a digitized map of the world on the face may look cool, but it is not good for much and I could do without it. Just the city and digital time would be enough. And, as everyone says, the watch functions are difficult to set and difficult to remember. Every year when going back and forth from daylight savings to standard, I just push the buttons until I finally make it happen. I will be getting another Casio. For the money you cant beat it. I am often in airplanes where cell phones cant be used to tell time, so just the phone time doesnt work for me, though the phone clock is great in other time zones on the ground as it always displays the local time zone. Please try again later. Please try again later. Mufaddal Photographer 5.0 out of 5 stars But this is a really light and sturdy watch. The Digital, the Worldtime also digital and if you want you can set your analog to a third time. Really useful when I am traveling I keep my analog at home time and switch mode to world time 2.

Has a DST option so there is no need to change the actual time. You still have to change the analog time though. 3. Resin strap is of a very good quality unlike some of the other Casio watches 4. Battery life is great. Changed batteries only once since buying it in Dec 2002 5. Backlight is green,

bright and perfectly timed 3 secs so it doesnt eat into your battery Cons. Come on! Its just a watch. Please try again later. Please try again later. A. Aziz 5.0 out of 5 stars As others have mentioned you can just keep wearing it wherever, at work, at the gym and for a Muslim like me who has to wash his hands, arms etc 5 times a day before praying, I can still keep the watch on as its water resistant. Its a perfectly smart watch, I normally just use the analogue display. In the gym however I also use the stopwatch to time myself between sets. Ah, the minor flaw I hear you ask. This basically meant visibility was not very good especially when outside in the sun, you have to look at the watch for several seconds to work out the time. Me being impatient Perhaps, but consider this drawback whilst driving where you just want a quick one second glance for the time. Anyway, I took the watch to my local watch dealer and he somehow painted the hands with some black ink for only a couple of quid. He told me afterwards not many watch dealers would do this!. So now I have the perfect watch which Im perfectly happy with Please try again later. Please try again later. Sumit Malhotra 5.0 out of 5 stars Has Dial display and digital time, along with databank to store phone numbers about 30. I have it for 2 years now, no problems, never took it off my wrist, i have other watches too, but never felt the need to wear another one with this with me Go get it Please try again later. Please try again later. In my case, its the Databank 150. And when the battery conks out, youd think that it was time to visit the local jewelers or KMart service desk to get the battery replaced.

## SERVICE MANUAL

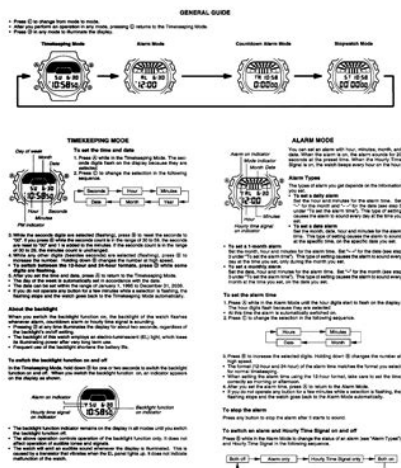

<http://www.familyreunionapp.com/family/events/bose-lifestyle-stereo-amplifier-manual>

Those teeny keys are just too small to work with, and it doesnt sync with my computers address book. What I find handy is the calculator function, which has proven useful on many occasions. Note that this guy doesnt keep any information in his Databank either. These instructions may be incorrect. I may be making them up as I go along. I will not be held responsible for you breaking your watch because you followed some instructions someone posted on the internet. Toss aside your warranty, grab your jewelers screwdriver, and unscrew the four tiny screws on the back. Lift the rear plate off gently so as not to disturb the waterproofing rubber gasket. Oops, too late. Well, do your best to stick it back in on reassembly. Remove the white plastic component protector gently, and youre looking at the battery. Unhook the metal retainer by pushing down and out on the

retainer with your jewelers screwdriver, and the retainer will pop loose from over the plastic catch. To clarify you are unhooking the metal retainer from where the plastic catch is holding it in place. This is a delicate operation; dont push too hard or youll ruin the retainer. Then remove the CR2016 battery and replace it with a new one. Ill say this as politely as I can Ive shared these instructions with you freely. Ive posted as much as I know. Please do not contact me to ask questions about Databank watches. Thanks! Any chance you could do a quick short video to demonstrate this motion I am thankful for not having to go to a jeweler! Cheers to the Databank 150 community! It took me a while, but it worked. The original post has a good picture to identify which end of the retaining clip will pop out open and which end acts like a hinge please leave this end alone. My smallest jewellery screwdriver blade was still too wide to fit into the tiny square hole. Using a pushpin, which is the right length and strength for the job, insert end into the square hole in the plastic part that sticks out.

<http://eurocomes.com/images/canon-70-300-manual-pdf.pdf>

Push the upper part of the pin back towards the body, gently. This causes the plastic part to push on the clip which springs loose and pops out. Replace the battery, using your fingers and orienting the battery correctly. Do not use metal tweezers as you will short out the battery. Now to reengage the retaining clip, press clip down with your finger and use a very small slothead jewelers screw driver to push the horizontal part of the retaining clip under the plastic part so the retaining clip will hold the battery down. Good luck I didnt seem to have trouble following your instructions down being well down, and out being away from the battery. I appreciate your post. I will not be suing you. Everything else works. There's just NO sound such as when I set the alarm. Also, would anyone know where I can locate a diagram of the internal structures of this Casio watch. Any help would be appreciated. There needs to be some electrical connection to the crystal beyond the back itself, so there is often a coil of leaf spring or two to make that connection. Maybe that went south during the battery replacement. Just a general observation. It must make a contact with the metal cover. I replaced my battery and when I did, a spring fell out. I looked all over the internet, then wrote Casio, who said they didnt have access to the information about where the spring went. Doh! I got a used

DB35H from my brother and was going to swap the innards when I noticed the spring on his. Put my spring back and it beeps. If you've lost the spring, don't know if you can fake it with tinfoil or not, but it really is a TINY spring. Good luck. If you put the back on turned 180 deg from where it was, the beep will not work. Take the back off and turn it around so that the spring can contact the metal part of the back, not the insulated part. Then the beep should work. YMMV. They should make the screw positions asymmetrical so this mistake cannot be made.

<http://electricpasion.com/images/canon-70d-user-manual.pdf>

A lot of questions can be answered by looking at the manual. It is what makes the beeping sound. If you're working on the watch, and turn it upside down to see the watch face, you can lose this spring. I think a watch place could easily replace it. Then I searched the web for 15 minutes before I found your page. THANK YOU! You saved my watch. Dave Does anyone know where I can either get a replacement spring OR what I can use to substitute it so that the alarm will work again. I use the alarm to remind me to take medication and keep missing my scheduled times without it and I'd hate to replace the watch because of a spring. I've worn out a lot of Casio Databanks in the past couple decades usually the case or the band breaks. Now I have a reason to keep the old ones for their springs. Go to calculator mode, then press the Set button in the upper left to toggle. All of which worked when the retainer flange nice word that holding the battery let go with a satisfying pop and the battery flew out. No plastic tweezers, no little springs stuck to the ceiling, no connecting positive to negative. Popped in the battery, popped on the back and hey presto. Anyone want to know the time Oh and thank you. Be brave mon braves. I couldn't go a day without it. I know. I need to get a life. I have a life and it's run by this watch. Thanks a million for the instructions. I just had a jeweler replace the battery. My husband is very mechanical a guitar maker. If I can find the battery cheap, he can replace it next time. The jeweler did give me a five year warranty so if you think about it the battery didn't cost that much. Thanks. This strip is meant to contact the back of the watch, where the crystals that Rich mentioned are bonded to the back. You can see the spring flap along the corner directly left of the yellow arrow in the picture. I imagine that if you depress this a bit so that it

doesn't poke all the way through to the back, then your watch will no longer beep including the alarm.

I've had this watch for over 10 years and never changed the battery until now. The battery I found inside was a Li 3 volt Sony CR2016. I replace the batteries myself in all my other watches, but couldn't do this one. Thank you thank you thank you! Wish I had found this website first, because it would've saved me about 20 minutes. The time is displayed in the lower area. Any ideas why this is happening? The store owner was afraid he'd cooked my watch and didn't charge for the new battery. Meanwhile, I had a useless joke with Open and the wrong time on my wrist for the rest of the day. I cleaned the contact points on the piezo crystal and case interior where the finger and spiral springs make contact and performed the AC jumper connect again. I turned the plastic inner shell so the slot allowed the finger spring to stick up and reassembled the case again. No joy. Open would not go away despite several attempts to repeat and reseat the works. Much to my surprise the watch sprang back into near normal operation. Fearing the loss of the radio, I manually set the time and went to bed. The next morning I checked and saw the little sat dish icon indicating that it had successfully performed an automatic update that night. Whew! I'm still not certain why the Open message was so hard to overcome but my gut feeling is that the plastic inner shell may be the part requiring precise alignment before replacing the back cover. In any case, I've decided to leave well enough alone as it seems fine as is. Once activated, the daily alarm will continue to do so unless turned off by the Receive button in alarm mode. Attempting to replace the plastic inner cover only brought back the Open message. This inner cover has two holes a slot and a round hole. On my post-battery replaced watch, two tiny coiled springs stick up from the watch inner frame a steel spring that protrudes through the round hole and a copper spring that is apparently compressed by the plastic cover.

<http://www.davidwoodpersonnel.com/wp-content/plugins/formcraft/file-upload/server/content/files/162746b112ac92---brother-8070p-fax-machine-manual.pdf>

The copper spring makes contact with one end of this strip, but it is the only point of contact. It seems that this strip is actually an electrical bridge that is intended to complete a vital circuit and that by taking out the plastic cover the copper spring makes contact with the case and allows the watch to exit Open mode and appear to function. This was confirmed by jumpering the copper spring to the adjacent steel structure covering the frame and seeing Open revert to the correct time again. Looking closely at the mount points on the watch frame, I see that the steel and copper springs both have a slightly elevated circle in the white polyethylene plastic and that there is another empty hole where a matching spring would make contact with the other end of the brass strip. When bridged in this manner, the watch returned to normal time mode and more importantly allows switching to alarm mode and changing of the alarm function via the Receive button. I am fairly sure that this also would allow the Receive button to either display the last update time or initiate an update if held in. Your information helped to solve the problem. As for the springs; I found that a single strand from a speaker wire wrapped around a .020 bit of safety wire made a nice replacement spring. Had to work under a magnifying lamp to see it I now have my trusty databank back in action! Replacing the battery myself was much more economical than paying 4X the cost of a battery to have someone else do it. I performed the AC procedure, and wonder what this is intended to do since there was no response from the watch. There is a little hole with a contact down in there by the AC mark on the retainer ring. Are these points supposed to be jumpered for 2 seconds I can't get in the alarm mode, or anything else. Thanks for any help, Chuck. Odds are you won't even see the spring it's so tiny, but the alarm won't work without it.

I substituted a very tiny snip of wire down in the hole where the spring goes and VIOLA. Cleaned up the connections on the copper bridge on the cover, made sure the tap was making contact with the cover through the plastic deal. Had to put a pin down into that little hole and try to connect with the

retainer ring. Is that right Before the battery was all the way out, I slid the new one carefully underneath. It worked for me, maybe it will work for you. Good luck, watch is still working. Before the battery was all the way out, I slid the new one carefully underneath. Good luck, watch is still working. My DH had taken his Casio watch to WalMart where we had purchased it to get the battery replaced. Couldn't, didn't, etc. I called to ask WM some information and was told Casio won't let them replace batteries our Target doesn't even sell watch batteries, any longer. Also, I was told that the WM clerk should have given him a box, so he could send it back to Casio. Following your photo and directions, he was then able to easily replace the battery. His watch hadn't quit running; but, the alarm had ceased working and the light no longer worked. Again, thanks for sharing! I just brushed the piezometer on the metallic cover of the watch with metallic wool it was grey after more than 20 years of oxidizing., and the watch beeps now as a charm ! I found it hard to believe as it was working properly till the battery ran out. I would like to thank all the people who have contributed to this page and the person who started it. I have got my watch to work again but the backlight is not working. Any ideas about what could be wrong. I tried the AC jumper thingy but haven't really understood how to do it, yet since my watch started working after my trial and error approach I didn't do anything else. I would appreciate any help regarding this, thanks in anticipation, Centaur.

With its analog and digital read out you can see the time in up to 2 time zones and the world time feature means you'll never have to guess how many hours difference it is between your location and home. Add in the 30page databank capability and you have all you need to call home without waking anyone up in the middle of the night. Products and names mentioned are the property of their respective owners. This page is part of GeneralManual.Com Network Casio ABX238BV Databank Watches User Manual. RSS.
